Preparing for your specialist Dermatology appointment

Talk to your dermatologist about how plaque psoriasis affects you

Moderate to severe plaque psoriasis comes with some common symptoms, but these symptoms affect people differently. Your dermatologist therefore needs to know exactly how plaque psoriasis affects *you*. Use this sheet to help guide the conversation with your dermatologist.

Think about your symptoms over the past week or two.

Are your red, scaly plaques bothering you?	Yes	No	Unsure
Do your plaques make you want to cover up or overdress	Yes	No	Unsure
every day?			
Are you getting the results you want from your current	Yes	No	Unsure
treatment?			
Do you have joint pain, swelling, or morning stiffness?	Yes	No	Unsure

Be sure to tell your dermatologist if you have joint pain along with your skin symptoms. That could be a sign that you have a related condition, called psoriatic arthritis.

Questions to ask your dermatologist about your condition:

Is my condition considered mild, or is it moderate to severe?

Can you tell me more about how my plaque psoriasis is related to my immune system?

What causes my plaque psoriasis to flare up?

Does your plaque psoriasis make everyday activities harder?

Talk to your doctor and ask if ENBREL may be right for you.
